

Robert Weed

MERANTI PLYWOOD VS OTHER PLYWOODS

Not all plywood is equal quality. Low quality plywood can result in telegraphing/defects showing through in the finished product. Using quality Meranti plywood, with a Meranti core from 30-40 year growth trees from a 2MM acre concession of strategically-managed growth, ensures quality veneers, fewer defects and saves time and money.

Robert Weed Corp's preferred partnership with our importer and our mill provides quality product that passes quality checks at the mill plus secondary grading at Robert Weed.

MERANTI PLYWOOD	OTHER PLYWOODS
Committed monthly volumes of high-quality plywood keeps production on schedule	Inconsistent supply chain, lost opportunity due to production shutdowns
Quality Meranti core, thicker-faced veneers, and calibrated sanding to reduce telegraphing/show through	Uses falcata core, thinner faced veneers, which can show defects once laminated
75 days of material on hand on US soil	Subject to the constraints of the global supply chain
On time delivery to customer, laminator location	Subject to the constraints of the national trucking shortage
Due Care Compliant	Risks of government shutdowns due to lack of compliance

THE ROBERT WEED DIFFERENCE

Robert Weed Corp is a wholesale distributor and value-add manufacturer of wood and wood products, with these six core criterion underscoring every partnership:

- SERVICE** | The right product at the right price delivered at the right time
- QUALITY** | Recommending, sourcing, and delivering the best solutions
- SUPPLY** | Transparency in tracking supply from origin through delivery
- ETHICS** | Doing the right thing, with your best interests in mind
- COMPLIANCE** | Only sourcing products that meet all requirements
- PRICING** | More control through forecasting, inventory and supply chain management
